

Synopsis:

Lead Software Engineer with 11+ years of experience designing and delivering scalable, cloud-native applications using AWS, TypeScript, Node.js, python, .net core, and react. Deep expertise in serverless architectures, event-driven systems (Kafka), and infrastructure-as-code (Terraform).

Recently focused on **building LLM-powered applications**, including **Retrieval-Augmented Generation (RAG) pipelines**, **LangChain-based integrations**, and **agent orchestration using LangGraph** for complex, multi-step workflows.

Hands-on experience leveraging **AI-assisted SDLC tools such as Cursor and Claude code** to accelerate development, improve code quality, and enhance engineering productivity

Experience Summary:

- **Industries:** *Fintech, Insurance, Energy & EV Charging Solutions, Education, Online Service Marketplaces*
- **Programming Languages:** *JavaScript, TypeScript, python, C#*
- **Gen-AI/LLM Framework:** *Langgraph, Langchain, RAG*
- **Vector database:** *pinecone*
- **AI-Assisted Development & Tools:** *Cursor, Claude Code, GitHub Copilot*
- **Backend:** *Node.js, .NET Core*
- **Frontend:** *React.js*
- **Cloud Services:** *AWS Lambda, ECS, S3, VPC, API Gateway, DynamoDB, RDS, Cognito, SQS, SNS, SES*
- **Infrastructure as Code:** *Terraform, AWS CloudFormation*
- **Databases:** *PostgreSQL, MS SQL Server, MySQL*
- **Development Tools:** *VS Code, Visual Studio*
- **Architecture & Patterns:** *Serverless Framework, Event-Driven Systems, Apache Kafka*
- **Project Management & DevOps:** *JIRA, Azure DevOps, GitLab*

Qualification:

Degree	Institute	Year
<i>Bachelor of Information Technology</i>	<i>LD College of Engineering</i>	<i>2015</i>

Certifications:

AWS Certified Solutions Architect – Associate

Project Experience:

Working with Hexaware Technologies Ltd. From Nov 2023 – Present

Project Name	<i>Credit platform for prominent UK based retail chain</i>
Role	<i>Senior Backend Engineer</i>
Environment	<i>Serverless, event-driven architecture, microservices, nodejs</i>
Cloud services	<i>Lambda, ECS, ECR, SNS, SQS, Cognito, SES, S3</i>
Duration	<i>Dec 2023 to May 2026</i>
Tools Used	<i>Cursor, VS Code, JIRA, Mambu, Gitlab</i>

Description: *Castle is a modular fintech platform enabling retail credit and account operations through independently versioned microservices. Built using Node.js (TypeScript) and deployed on AWS (ECS, Lambda) with Infrastructure as Code (Terraform), the platform follows an event-driven architecture using Kafka-style contracts with shared schemas. It integrates with Mambu as a core banking system and supports a wide range of capabilities including customer onboarding, third-party credit evaluation integrations, customer and agent operations, payments, statements, and reporting. The platform operates with robust CI/CD pipelines on GitLab and enforces strict environment segregation (UAT, Production) to ensure reliability and compliance*

Roles and Responsibilities:

- *Delivered high-quality backend features within defined timelines, ensuring scalability, performance, and reliability of distributed microservices.*
- *Actively contributed to code reviews, enforcing best practices, clean architecture principles, and continuous improvement through POCs*
- *Collaborated closely with tech leads and cross-functional teams in designing solutions for new business requirements*
- *Mentored team members and supported onboarding to accelerate team productivity and knowledge sharing*
- *Implemented security best practices including authentication, authorization, data encryption, and vulnerability management*
- *Played a key role in managing and coordinating releases across multiple microservices in a CI/CD-driven environment*
- *Contributed to building resilient event-driven integrations and ensuring seamless communication between services*

Working with Tatvasoft from July 2016 – Nov 2023

Project Name	Online service marketplace
Role	<i>Tech Lead</i>
Environment	<i>Node.js, Typescript, Serverless, AWS, Lambda, SQS, SNS, Cognito, RDS, Postgres, React.js</i>
Cloud services	<i>Lambda, ECS, ECR, SNS, SQS, Cognito, SES, S3, EventBridge</i>
Duration	<i>Dec 2021 to October 2023.</i>

Tools Used Postman, Jira, VS Code, Git

Description: The platform consists of two primary systems: a Vendor Platform and a Customer Portal. The Vendor Platform enables individual service providers and businesses to register, manage profiles, and list services such as plumbing, electrical work, babysitting, tutoring, and pet care. Providers can define their availability, set hourly or package-based pricing, and manage their service offerings. It also supports business accounts, allowing organizations to onboard professionals and share resources across multiple businesses.

The Customer Portal displays available services based on provider offerings and real-time availability, enabling customers to seamlessly browse, book, and place service requests. The platform includes integrated payment capabilities, allowing customers to complete transactions securely. Service providers receive payouts through the platform after applicable fees are deducted, based on configurable revenue models defined by administrators.

An Admin module provides comprehensive control over the ecosystem, including managing user profiles, service catalogs, revenue configurations, order tracking, dispute resolution, and analytical reporting to support operational and business decision-making.

Project Name eMobility Service Provider
Role Tech Lead
Environment Node.js, Typescript, Serverless, AWS, Lambda, SQS, SNS, Cognito, MQTT RDS, Postgres, React.js
Duration Dec 2019 to May 2021.
Tools Used Postman, Jira, VS Code, Git

Description: Built a digital platform for EV drivers to register (including social logins), locate charging stations via map-based interfaces, and monitor real-time charging availability. Enabled users to start/stop charging sessions and receive live updates through OCPP protocol integration with physical charging stations.

The system includes a fleet management portal for organizations to manage drivers and consolidate billing across charging sessions. An admin portal provides capabilities for user management, real-time session monitoring, analytics, and payment management. Additionally, a marketing module allows users to explore nearby services such as cafes and restaurants during charging sessions.

Project Name Charge Point Operator (CPO) System
Role Tech Lead
Environment Node.js, Typescript, Serverless, AWS, Lambda, SQS, SNS, Cognito, RDS, Postgres, React.js
Duration May 2021 to Dec 2021
Tools Used Postman, Jira, VS Code, Git

Description: CPO Platform allows EV charging providers to register their system on the portal which communicates with physical charge stations and manage stations, locations and allows multiple eMSP system to register in the system. Charge station will send real time data to CPO system through OCPP protocol, and then CPO system will update all the eMSP platforms through OCPP protocol. eMSP systems have integrated websocket so they will send real time updates to app on which charging session is displayed. There is central admin portal which manages all the cpos, sync master data to all the

CPOs registered.

Project Name Smart City Software
Role Senior Software Engineer
Environment Node.js, Typescript, Serverless, AWS, IoT, Lambda, SQS, SNS, Cognito, RDS, Postgres
Duration July 2018 to May 2019.
Tools Used Postman, Jira, VS Code, Git

Description: Designed and developed a smart city platform leveraging IoT and cloud technologies to address urban challenges such as energy optimization, air quality monitoring, and flood risk management. Integrated diverse IoT devices with secure certificate-based communication.

Features include real-time device monitoring, service and maintenance tracking, geospatial visualization using maps, automated alerts for authorities, and configurable ETL pipelines for third-party integrations. The solution enhances operational efficiency and enables data-driven decision-making for city management.

Project Name Insurance Solutions for Advisors
Role Software Engineer
Environment .NET Framework, C#, WCF, MS SQL, DocuSign
Duration Oct 2016 to July 2018
Tools Used Postman, TFS, Visual Studio, Git

Description: Developed a comprehensive insurance platform tailored for financial advisors to manage client insurance needs. The system enables users to explore and compare insurance products such as life, disability, and long-term coverage.

Implemented features such as single sign-on (SSO), e-signature integration (DocuSign), and an advanced insurance calculator for estimating coverage and premiums. The platform streamlines documentation, enhances advisor productivity, and improves client experience through intuitive workflows and comparison tools.

Previous work experience

- ☐ Worked as a Tech lead at Tatvasoft from July 2020 to Oct 2023.
- ☐ Worked as a Senior Software Engineer, Software Engineer at Tatvasoft from July 2016 to July 2020
- ☐ Worked as Jr. NET Programmer at Nyusoft Solutions from Aug 2015 to July 2016
